

Invoice Kanban Board

Create an Invoice Kanban Board as an SPA in Nuxt.js using Vuetify following the design provided below. Make sure to use SCSS preferably with a BEM naming approach. It's extremely important that everything is built with a component-based approach. Use TypeScript.

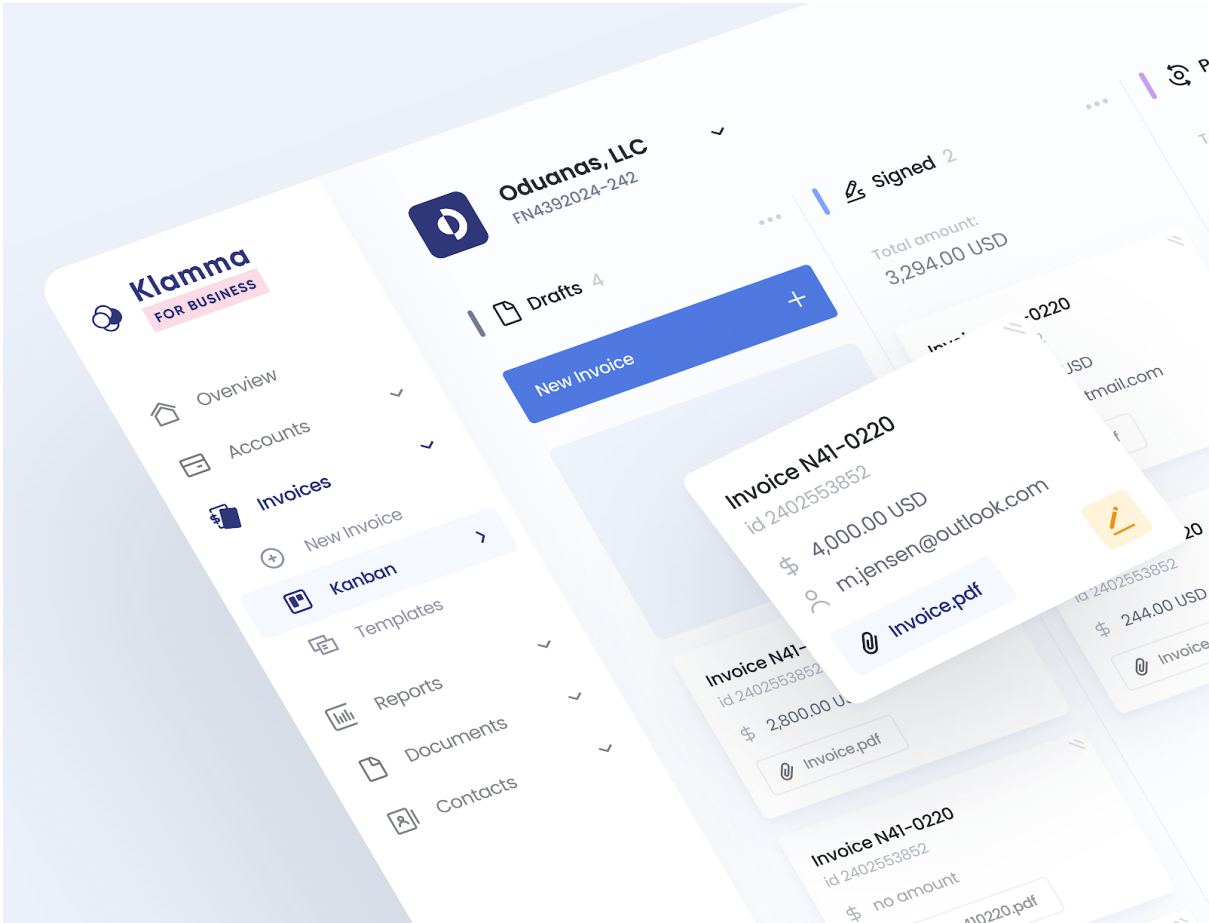

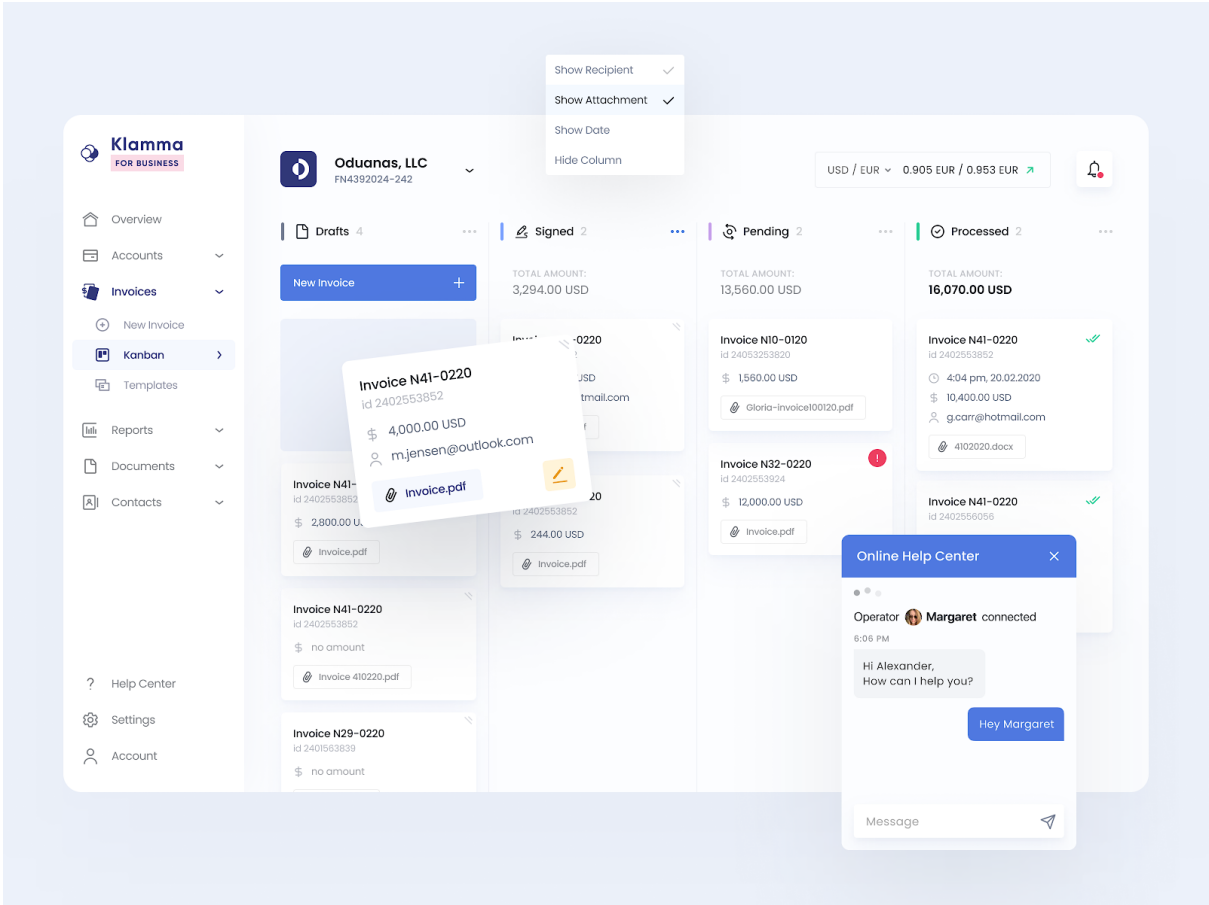

Remember it's just a prototype, but it still has to be functional. Most importantly the design has to look like the visuals provided.

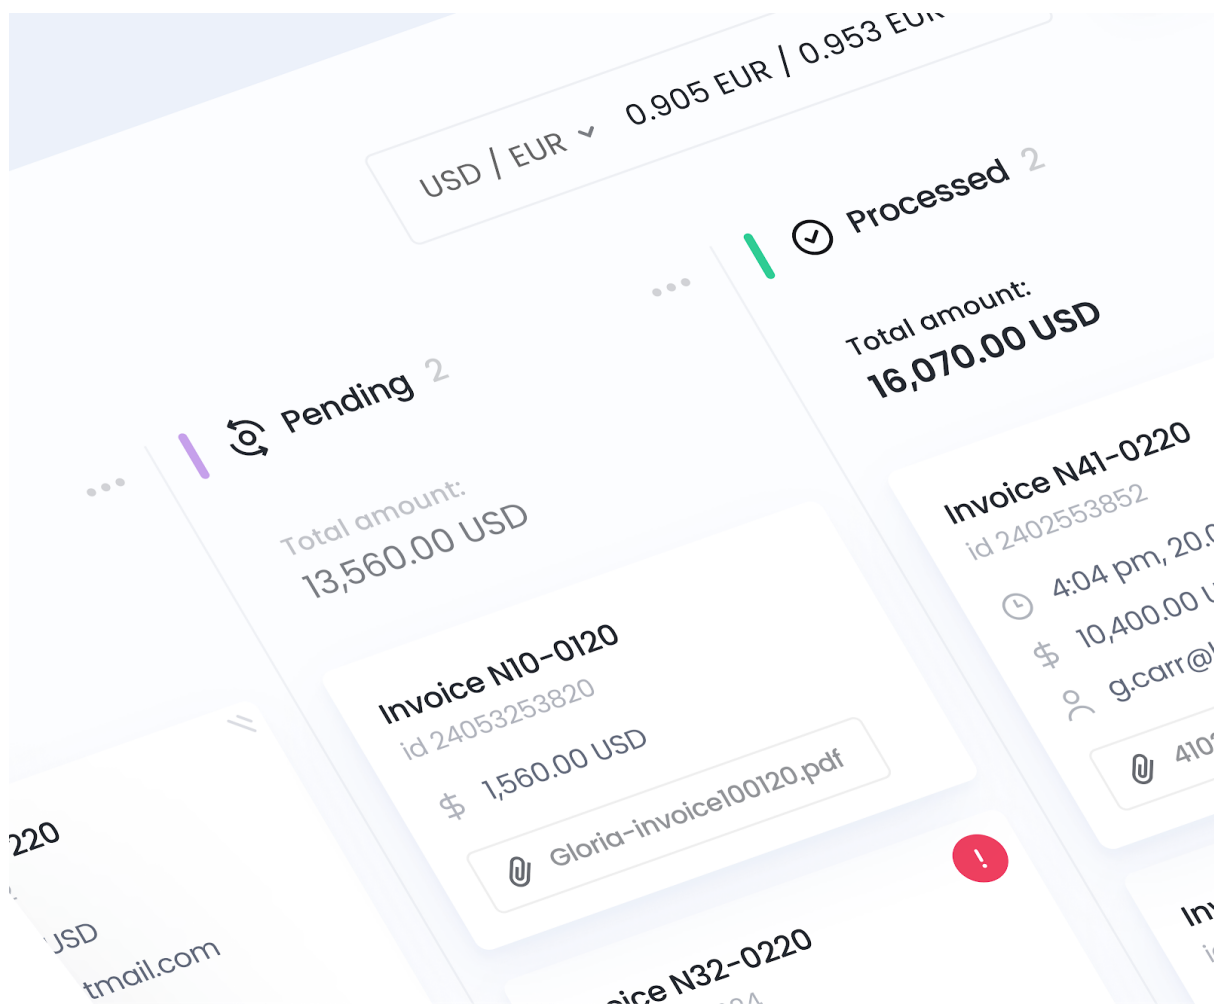

Visuals

Design

Must look like the following:

<https://dribbble.com/shots/10857100-Klamma-for-Business-Invoice-Kanban-Board>

Icons

Feather Icons (<https://feathericons.com>)

Fonts

Roboto (<https://fonts.google.com/specimen/Roboto>)

Open Sans (<https://fonts.google.com/specimen/Open+Sans>)

Structure

Must follow the visuals of the design illustrated above.

Sidebar

- Brand area
- Main navigation (below logo)
- Secondary navigation (bottom)

Page

- Page Header
- Page Content
- Page Footer

Pages

- Dashboard (doesn't need any content but is needed for routing)
- Kanban board (Important! Require all the time you would have used for 7 pages. It must work flawlessly.)

Functionality

Sidebar navigation

- Fold/unfold subnavigation
- Active link based on routing

Kanban board *(UX must be similar to Trello)*

- Lists
 - Add new list
 - Edit list (icon, naming, color)
 - Delete list
 - Lists must be draggable so we can rearrange them
- Cards
 - Add new card
 - Edit card
 - Delete card
 - Cards must be draggable so they can be moved into a different board
